Profile

I'm a Mobile App Developer with experience in native mobile app development. Throughout my career, I've built many **Android** applications, most of them with **Jetpack Compose**. After that I got into native **iOS** development using **SwiftUI** and have developed a few iOS apps since.

Experienced in solving both UI problems and logic problems, I've create a large amount number of **custom UI** components, designed many databases and used countless tools to achieve desired outcomes.

I strive to develop intuitive, user friendly apps while maintaining **simplicity** and **performance** of said apps. At the same time I try to learn **new technologies** and best practices to enhance the app development.

Education and Certificates

Posts and Telecommunications Institute of Technology (2016 - 2021)

Bachelor of Engineering in Computer Science

GPA: 3.6/4.0

Test of English for International Communication

Score: 925 / 990

Technical Skills

Common Mobile Development

- Strong ability to develop mobile application from start to end, including handling **App Store/Google Play**.
- Build elegant and performance UI using both **Jetpack Compose** and **XML Views** (Android) and **SwiftUI** (iOS).
- Creating custom UI components or custom animations to suit the requirements.
- Design suitable, clean and scalable app architecture using **Model-View-View Model (MVVM)**.
- Applying **multi-modules** (Android) and **multi-packages** (iOS) app architecture.
- Design and implement databases using **Room** database (Android) and **GRDB.swift** (iOS).
- Use dependencies injection tools: **Hilt**, **Koin** (Android) and **Swinject** (iOS).
- Handle custom graphic components using **OpenGL** (Android) and **Metal** (iOS).

Android Specific

- Integrate C and C++ code into development using Android NDK.
- Handle network calls using **Retrofit** or **Ktor**.
- Create, edit or play media using Android Native **Media3** framework.
- Handle **Google Play Store Console** account and policies.
- Expert in implementing monetization with **ads** and **in-app purchases**.
- Develop and publish libraries and SDKs for internal use.
- Integrate local **Tensorflow Lite AI models** into the app.
- Optimize app performance with **Baseline Profile**.

iOS Specific

- Handle **App Store Connect** app deployment and policies.
- Implement monetization with **ads** and **in-app purchases**.
- Use **SwiftGen** tool to generate compile time type safe resources.

General and Others

- Strong understanding about application **architecture** as well as using appropriate tools to achieve the result.
- Skillful in **OOP, design patterns, data structure and algorithm**.
- Use many tools such as **Git, Firebase, Docker, AWS** and **GCP** for development purposes.
- Write code in other languages such as **Python, Javascript** or **C++** for other tasks such as mass data manipulation or simple websites.
- Take part in **monetization analyze sessions** to pin-point problems and optimize show rate and eCPM (for Ads) and purchase rate (for IAP).

Work Experiences

Jun 2023 – Oct 2025

Apero Technologies
Group & Astronex JSC

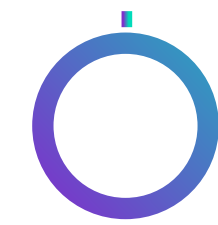

Mobile Software Developer

Started as Android Software Developer. Later got into developing iOS applications using SwiftUI to expand market reach. Ultimately promoted to technical expert title in the company.

- Implement Android native applications and libraries.
- Implement iOS native applications using SwiftUI.
- Troubleshoot and optimize Ads and IAP monetization in apps.
- Offer both non-technical and technical recommendations and advices throughout apps development flow.

May 2022 – Jun 2023

Trek2000 International

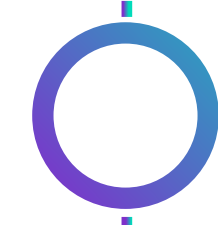

Android Software Developer

Develop Android software products from scratch. Participate in new ideas research as well as improve current products.

- Developed Android application to unlock encrypted usb device using biometrics and bluetooth low energy (BLE).
- Developed Android application to receive, control and livestream from a flashlight with embedded camera.

Apr 2021 – May 2022

Samsung Vietnam
Mobile R&D Center

Android Framework Engineer

Take part in developing, maintaining and improving company's mobile graphics framework. Look into ways to improve graphics performance in Company's mobile devices.

- Research new inventions to be applied into the mobile phone.
- Achieved Professional title in Algorithm tests.

Highlight Projects

Muslim Prayer (Android & iOS)

An Utilities app for Muslim: Qibla Compass, Quran, Prayer Times, Hijri Calendar...

Highlight responsibilities:

- Create and manage projects from scratch.
- Design and implement databases using Room (Android) or GRDB.swift (iOS).
- Design and implement Quran audio feature:
 - Use Google Play Asset Delivery (Android) then migrated to Firebase Storage to hold Audio Assets.
 - Use ExoPlayer to create playlist and play Quran verses (Android).
- Research and implement local Prayer Times calculator based on location and date.
- Implement dynamic app themes; app widgets with Glance (Android); custom tasbeeh counter.
- Migrate project into Multi-Modular project.

Details Android: vanhieunguyen21.github.io/#/project/muslimprayer

Details iOS: vanhieunguyen21.github.io/#/project/muslimprayerios

Retica - Photo Editor (Android)

A photography app, allowing capturing, editing images and more...

Highlight responsibilities:

- Create and manage project from scratch.
- Research and implement image processing pipeline using OpenGL including writing various OpenGL shaders.
- Integrate numbers of Tensorflow Lite (now LiteRT) models for on-device machine learning such as Subject Segmentation, Inpainting, Upsampling (enhance) and Style Transfer.

Details: vanhieunguyen21.github.io/#/project/retica

Mirae - Video Editor (Android)

A video app that lets you record, create and edit videos with many features...

Highlight responsibilities:

- Create and manage project from scratch.
- Research and implement video processing pipeline using Media3 Transformer.
- Create video filters and adjust effects using OpenGL.
- Implement highly customized UI components for specific purposes (such as timeline bar).

Details: vanhieunguyen21.github.io/#/project/mirae

Charme - Photo Editor (iOS)

A photography app, allowing capturing, editing images and more...

Highlight responsibilities:

- Create and manage project from scratch.
- Research and implement image processing pipeline using Apple Metal.
- Integrate local AI models using Google Mediapipe.
- Use SwiftGen tool to generate compile time type-safe resources and write scripts to generate if needed.

Details: vanhieunguyen21.github.io/#/project/charmeios

Heka - Calories Counter (Android)

A health app that lets you scan your meal to analyze its nutrient and help you control your nutrient.

Highlight responsibilities:

- Create and manage Android project from scratch.
- Take part in machine learning model optimization by analyzing model pipeline and propose improvements.
- Play an important role in application and monetization optimization.
- Work directly with backend to implement, troubleshoot and improve features:
 - Authentication using OpenID Connect and OTP.
 - Syncing Premium subscription status between server and client.
 - Feature API callings.
 - Syncing data between many devices.

Details: vanhieunguyen21.github.io/#/project/heka

Nutrigen - Meals Generator and Calories Calculator (Android)

A health app that lets you generate your meals based on your preferences and monitor your diet progress.

Highlight responsibilities:

- Create and manage project from scratch.
- Collect resources from various sources to create a food database.
- Implement Genetic algorithm to generate random meals based on calories, macros, micros.
- Implement custom draw operations to generate health reports in PDF.

Details: vanhieunguyen21.github.io/#/project/nutrigen

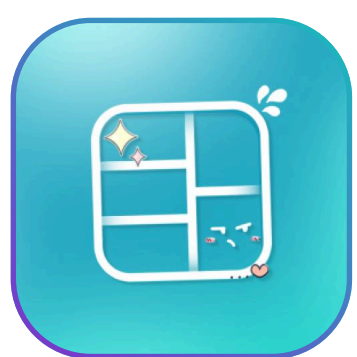

Retro Emulator (Android)

An emulator application that lets you play retro games such as Gameboy, Nintendo, Atari...

Highlight responsibilities:

- Research, scrape resources into cheat code database and implement cheat code feature for games.
- Implement customize controllers and themes feature.

Details: vanhieunguyen21.github.io/#/project/retroemulator

Bluen - Collage Maker (Android)

A photography app focusing on assembling multiple images into one.

Details: vanhieunguyen21.github.io/#/project/bluen

QR Scanner (Android)

Lets you scan QR codes and categorize them. Provide other tools such as create QR Code and scan documents.

Details: vanhieunguyen21.github.io/#/project/qrcode

Blood Sugar (Android)

A health app that records blood sugar, blood pressure, heart rate records and create your medicine reminders..

Details: vanhieunguyen21.github.io/#/project/bloodsugar

DramaPop (Android)

A video streaming app that lets users stream short videos from server.

Details: vanhieunguyen21.github.io/#/project/dramapop

Viridis AI Art (Android)

Lets users turn their images into styled AI generated images. Also support drawing to elevate imaginations.

Details: vanhieunguyen21.github.io/#/project/viridis

She Calendar - Period Tracker (Android)

A health that helps predicting Women Period days along with abilities to note sytoms, view historical data or set reminders.

Details: vanhieunguyen21.github.io/#/project/shecalendar
